

# Special Waste Disposal. Our Speciality.

Safe Disposal of Complex Waste. Efficient.  
Sustainable. Reliable.

# When critical waste streams require safe solutions

The hazardous waste incineration plant in the Lausitz Industrial Park in **Schwarzheide** specializes in treating complex hazardous waste and combines safe disposal with high operational availability and sustainable treatment in a rotary kiln.

Specializing in  
hazardous waste

Specializing in  
hazardous waste

Energy  
recovery

High temperatures  
of over 1.100 °C

Maximum variety of  
containers

Flue gas cleaning of  
the latest generation

No flash point  
restrictions

24/7 Delivery &  
Disposal

## Our Strengths

### Critical Hazardous Waste

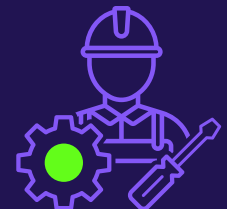

- **Focus on hazardous substances:**  
Waste with high levels of halogens (chlorine, bromine), sulfur, silicon, or phosphorus
- **Physical states:**  
Liquid, paste-like, and solid waste, as well as liquefied gases
- **Expertise:**  
Extensive experience with heavily contaminated waste and challenging specifications

### Technical Infrastructure & Specialties

- **Corrosion resistance:**  
Use of PTFE-lined systems
- **High-melting-point waste:**  
Direct incineration up to 95 °C or storage in a tank at temperatures above 140 °C
- **Aqueous waste:**  
Tank fillig in a vessel with a pH > 5 in a 300 m<sup>2</sup> storage tank

### Possible delivery

- ISO tank containers
- Vacuum trucks
- Rail tank cars
- 5-m<sup>3</sup> pressure containers
- 1-m<sup>3</sup> pressure containers
- IBCs
- Small containers up to 39.5 cm x 39.5 cm x 70 cm (maximum 25 kg)

## Industrial Waste Management with Expertise

We are more than just waste management – we are your industrial partner in the circular economy. Our facility is designed to meet the highly complex requirements of modern production processes in Germany and Europe. Where standard solutions reach their limits, we provide technical process reliability.
